

Claims

1. A method for presenting at least a part of a page, comprising:
 - at least partially dividing at least one page into a plurality of areas;
 - presenting said plurality of areas in a first representation,
 - making at least one area of said plurality of areas an active area; and
 - in response to a user operation on said at least one active area, presenting at least one of said at least one active areas in a second representation.
2. The method according to claim 1, wherein in said user operation, at least one of said at least one active areas is selected, and wherein at least said selected area is presented in said second representation.
3. The method according to claim 1, wherein at least two areas of said plurality of areas are made active areas.
4. The method according to claim 1, wherein said at least partial division of said at least one page into said plurality of areas is based on a structure of at least a part of said at least one page.
5. The method according to claim 1, wherein said at least partial division of said at least one page into said plurality of areas is based on a sectioning algorithm.

6. The method according to claim 1, wherein in said first representation, at least one area of said plurality of areas is scaled to a size that is smaller than the original size of said respective area.
7. The method according to claim 1, wherein in said first representation, at least one area of said plurality of areas is cropped.
8. The method according to claim 1, wherein in said first representation, at least one area of said plurality of areas is indicated by an icon.
9. The method according to claim 1, wherein areas of said plurality of areas with a size that is above a size threshold, or that contain an amount of information that is above an information threshold are made active areas, or both.
10. The method according to claim 1, wherein at least one of said at least one active areas is automatically focused, or selected according to a selection criterion, or both.
11. The method according to claim 1, wherein in said second representation, said at least one active area is scaled to a size that is larger than its size in said first representation.
12. The method according to claim 1, wherein within at least one of said areas presented in said first

representation, elements can be directly selected by a user.

13. A computer program with instructions operable to cause a processor to perform the method steps of claim 1.

14. A computer program product comprising a computer program with instructions operable to cause a processor to perform the method steps of claim 1.

15. A device for presenting at least a part of a page, comprising:

means for at least partially dividing at least one page into a plurality of areas;

means for presenting said plurality of areas in a first representation;

means for making at least one area of said plurality of areas an active area; and

means for presenting at least one of said at least one active areas in a second representation.

16. The device according to claim 15, wherein said areas are presented on a display module, or on a display of a portable electronic device.

17. A system for presenting at least a part of a page, comprising:

means for at least partially dividing at least one page into a plurality of areas;

means for presenting said plurality of areas in a first representation,

means for making at least one area of said plurality of areas an active area; and

means for presenting at least one of said at least one active areas in a second representation.
